EXECUTIVE SUMMARY

Software Engineer with strong experience in Java and backend development, focused on building APIs and integrating enterprise systems. Skilled in developing reliable, scalable services and troubleshooting real-world production issues. Familiar with AWS, containerization, and modern development tools, with a focus on writing clean, maintainable code.

TECHNICAL PROJECTS

- Technical Debt Negotiator (Agentic AI) <https://github.com/priyanka-patil-tech/technical-debt-negotiator>
 - Developed a 5-stage AI agent pipeline that scans repositories and JIRA backlogs to quantify technical debt, providing automated "Refactor vs. Build" recommendations to stakeholders.
- Ascend Supply Chain Hackathon Winner (2025)
 - Built an AI-powered, adaptive scoring model to drive resilience in enterprise supply chains, earning the top prize in a competition financed by Cummins.
- Job Application Co-Pilot <https://github.com/priyanka-patil-tech/job-fit-analyzer>
 - Engineered a multi-agent system leveraging RAG and vector databases to automate resume tailoring, cover letter drafting, and lead generation via LinkedIn scraping.

WORK EXPERIENCE

Dell Technologies

Senior Software Engineer

Bangalore, India

Mar 2018 - Feb 2023

- Migrated a legacy data center monolith to a Kubernetes-based microservices architecture, supporting 8,000 servers and achieving a 60% performance gain and 30% increase in scalability.
- Led a team of 5 developers to deliver 8 high-impact server monitoring features within 6 months by collaborating directly with product managers and stakeholders to align technical execution with business goals.
- Achieved 100% unit test automation and code coverage by driving a "shift-left" quality initiative, which reduced production defects by 40% and prevented recurring critical outages.
- Reduced high-severity security vulnerabilities by 60% by facilitating remediation efforts with SonarQube, BlackDuck, and Nexus, ensuring enterprise-grade compliance for server maintenance applications.
- Translated complex customer pain points into 7 prioritized product enhancements, resulting in a 25% reduction in support tickets over two quarters and earning recognition for strategic wins.

HCL Technologies

Technical Lead

Bangalore, India

Jan 2015 - Jan 2018

- Partnered with Toyota Motors stakeholders to modernize a legacy COBOL mainframe system, leading the design of a Java-based RESTful services framework that improved system maintainability by 40%.
- Eliminated 90% of critical security issues and 100+ code smells by integrating automated SonarQube scans into the development lifecycle, significantly hardening the application's security posture.
- Accelerated onboarding and increased team productivity by 25% by mentoring 5+ developers with non-Java backgrounds through targeted training on Spring and Hibernate

iGATE Capgemini

Senior Software Engineer

Bangalore, India

Mar 2010 - Jan 2015

- Developed loosely coupled portlets for multiple modules in a Nokia Solution Networks project, integrating them as plugins on the portal to enhance modularity and reusability.

- Utilized WebLogic’s “zero downtime” deployment feature to improve application availability, earning recognition from the client for minimizing service interruptions.
- Implemented caching and data compression techniques that accelerated page load time from 2 seconds to just 10 milliseconds, significantly enhancing user experience and earning special recognition from the client.
- Developed and enhanced the Trip Optimizer application for GE’s transportation project, delivering key feature upgrades that improved operational efficiency and optimized route planning.

Icicle Technologies

Mumbai, India

Software Engineer

Oct 2008 – Feb 2010

- Designed and developed core modules for an on-demand field service management system using Ruby on Rails, improving field operations tracking and task assignment efficiency.
- Implemented dynamic data visualization features using the GWT framework, enabling business leaders to make informed decisions through real-time charts and performance dashboards.

SKILLS

- **Languages & Frameworks:** Java 8, Python, JavaScript, SQL, Spring Boot, Hibernate, Ruby on Rails.
- **Cloud & Infrastructure:** AWS (Certified Technical Essentials), Kubernetes, Docker, PostgreSQL, Oracle, MS SQL Server.
- **AI & Data Science:** Agentic AI Architecture, MCP Integration, RAG, Vector Databases, Tool Calling, Prompt Engineering, Predictive Modeling, Regression Analysis.
- **DevOps & Tooling:** Jenkins, Maven, Git, SonarQube, BlackDuck, Atlassian Pipelines, JIRA.

EDUCATION

University of Washington - Michael G. Foster School of Business (In progress)

Seattle, WA

Master of Science in Information Systems

May 2025 – June 2026

GPA: 3.85

University of Mumbai

Mumbai, India

Bachelor of Engineering in Electronics

Jul 2003 – May 2007

Grade: First Class

ADDITIONAL INFORMATION

- Winner of 2025 Ascend Supply Chain Hackathon (sponsored by Cummins), driving the creation of an AI-powered, adaptive scoring model to advance inclusive and resilient supply chains.
- Speaker at Open Source India 2021, where I presented innovative blockchain-based solutions leveraging Ethereum for real-world applications.
